DJXHACK RESIDENCY · SELECTION ONLINE CHALLENGE 2026
THEME: EVERYDAY MAGIC

SAFE TILL HOME

You travel alone.
You don't have to feel alone.

CREATED BY RIDHI JAIN

THE EVERYDAY MOMENT

Every evening, across India, students and young women travel home from college, coaching classes or work. Somewhere, someone waits for a message. "Reached?" "Text me when you reach." A small, familiar ritual of care, and a small weight for both of them.

> **What if the journey home could feel a little less lonely?**

THE IDEA

Safe Till Home is a quiet companion for the journey back. Before she leaves college, she taps "I'm going home," picks a destination and chooses one trusted person, such as her mother, a sister or a friend. That person sees a calm journey status and an estimated arrival time, so nobody has to keep asking "Reached?" During the trip, a single tap answers a gentle check-in. If a check-in is missed or the route changes unexpectedly, the app first asks her whether she is okay, and support grows step by step only if it is needed. She stays in control and can end sharing at any time. The journey closes with a simple, warm moment: "You're home."

01 **Start journey** → 02 **Share with a trusted person** → 03 **Check in** → 04 **Receive support if needed** → 05 **Arrive home**

Why this is Everyday Magic

The magic is not an emergency button. It is an ordinary walk home becoming quietly accompanied: a familiar worry from an Indian evening turned into a small moment of calm, with nothing new to learn and no one to chase for an answer.

JUDGING CRITERIA

- Originality p.3
- Clarity of interaction p.2
- Emotional impact p.1–2
- Potential to build p.3

OPTIONAL INTERACTIVE DEMO · safe-till-home-demo.vercel.app

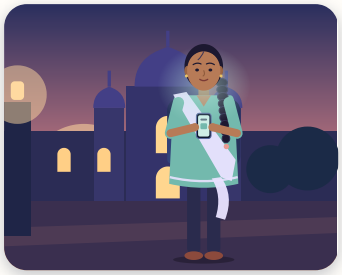

One journey. Five quiet moments.

What she does, how the idea responds, and what her trusted person sees.

CLARITY OF INTERACTION

1 Start the journey

She leaves college and opens Safe Till Home. The first tap is an ordinary one: "I'm going home."

HER SCREEN

Safe Till Home

I'm going home

Choose destination

Select trusted contact

Start journey

THE OLD WAY

Reached?

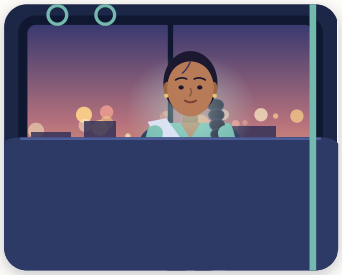

Will text when I reach

Call me when you do

Reached??

2 Quiet companionship

She selects Home and her mother. From here she can travel normally, without answering constant calls.

Mum

End journey

MUM'S PHONE

6:31
EVENING

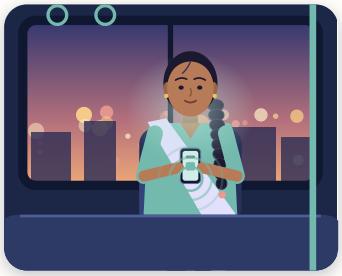

SAFE TILL HOME

She's on her way home.

Estimated arrival: 6:42 PM.

3 Gentle check-in

Mid-journey, one soft question appears. A single tap confirms she is okay, and the phone goes back in her bag.

HER SCREEN

Safe Till Home

Everything okay?

I'm okay

I need help

MUM'S PHONE

6:36
EVENING

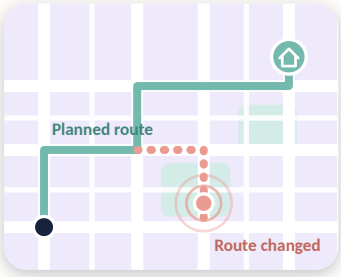

SAFE TILL HOME

Check-in confirmed.

She's okay. Journey on track.

4 Something changes

A route change or missed check-in prompts a question first. It does not prove danger, so nothing escalates before she answers.

HER SCREEN

Safe Till Home

JOURNEY CHANGE

We've noticed a change in your journey. Are you okay?

I'm okay

Get help

GRADUAL SUPPORT

1 Ask her first

2 Wait, then gently re-ask

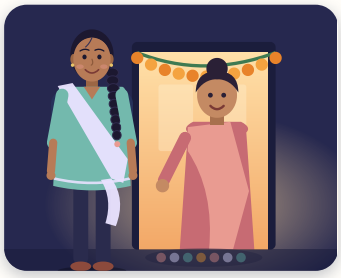

3 Alert her trusted contact

4 Offer help options

5 Arrival and relief

She reaches home. Sharing stops by itself, and Mum gets one calm line instead of a worried one.

Worry — Reassurance

HER SCREEN

YOU'RE HOME

Journey complete

Sharing has stopped.

MUM'S PHONE

6:42
EVENING

SAFE TILL HOME

She has arrived.

Journey complete.

→ Read each row left to right: the moment, her screen, the other side.

All screens are proposed concept mock-ups.

Before anything goes wrong.

ORIGINALITY · POTENTIAL TO BUILD · EMOTIONAL IMPACT

What makes it different?

Safety and location-sharing tools already exist. Safe Till Home focuses on the **everyday journey before an emergency**, starting with the ordinary action "I'm going home" rather than waiting for something to go wrong.

Quiet reassurance
Calm status updates, not constant monitoring.

Low-effort check-ins
One tap: "I'm okay."

User-controlled trust
She chooses who sees her journey.

Gradual support
Ask, wait, then escalate. Never an automatic panic.

A meaningful ending
The journey closes with "You're home."

How could it be built?

A credible **prototype** that can be made with a small team and common web tools:

1. **Mobile-friendly web interface**
2. **Journey start and completion states**
3. **Destination and trusted-contact selection**
4. **Simulated GPS coordinates or a map-based route**
5. **One-tap check-in notifications**
6. **Rule-based route-change and missed-check-in demo**
7. **Trusted-contact dashboard**

Simulated location data is enough to demonstrate the concept. No production-ready GPS system is needed at this stage.

Future possibility: AI-assisted pattern detection could be explored later. It is not required, and it would never be treated as certain proof of danger.

Privacy and responsible design

- Location sharing is explicit and user-controlled.
- She can end a journey and stop sharing at any time.
- Clear confirmation steps help avoid false alarms.
- Only selected trusted contacts receive journey updates.
- A route deviation or missed response is not proof of danger.
- The prototype does not guarantee personal safety or replace emergency services.

Potential impact · qualitative aims, no test results claimed

Fewer repeated check-ins
Fewer "Reached?" messages and anxious calls in the evening.

Reassurance for loved ones
A calm, clear signal replaces guesswork while she travels.

Independence, still connected
She travels on her own terms and never feels unaccompanied.

Safe Till Home turns the everyday journey home into a quiet experience of being accompanied.

You travel alone. You don't have to feel alone.
